**Clydesdale**

**Clydesdale high quality equestrian buildings are designed to combine comfortable, safe and secure stabling that will be long-lasting and require minimum maintenance.**

#### TRADITIONAL DESIGN, ROBUST PERFORMANCE

Our buildings are extremely durable and weatherproof. We manufacture using traditional vertical cladding, a construction that is attractive, very strong and provides excellent resistance to driving rain.

The cladding is 1" thick V-jointed Redwood (nominal size) with a deep T&G interlocking profile. This joinery-grade timber is pressure-treated with preservative (Protim) and given a secondary coat of Cuprinol to provide an attractive finish.

The framing is 3"x 2" Redwood, a planed timber with the edges 'eased' to minimise the risk of splinters. All fittings are a heavy duty grade and fully galvanised.

It is this high specification of materials and attention to detail that makes Clydesdale stables the benchmark for quality and design.

#### UNIQUE SEVEN YEAR WARRANTY

The quality of Clydesdale buildings is underlined by our unique 7-year warranty, unmatched by any other stable manufacturer and your reassurance of total satisfaction.

#### VENTILATION - THE KEY TO A COMFORTABLE STABLE

Fresh air and good ventilation are the foremost requirements for a healthy stable environment. Our designs, developed with specialist consultants, ensure optimum, draught-free movement of air.

#### SERVICE AND SUPPORT

Our customer service team can offer design advice, planning assistance or arrange local site visits to view Clydesdale stables and speak to owners. All buildings are erected on site by our own team of joiners, or can be offered on a 'delivered only' basis. We supply and erect to most parts of the UK, Eire and mainland Europe.

## CHOICE, FLEXIBILITY AND CONVENIENCE

We offer two standard ranges, the Jutland and higher specification Brabant. However, as all buildings are made to individual order, bespoke dimensions, fittings and features can be included to meet any requirement. We also provide a wide range of accessories which can be installed by our joiners on delivery, leaving your stable ready for immediate use.

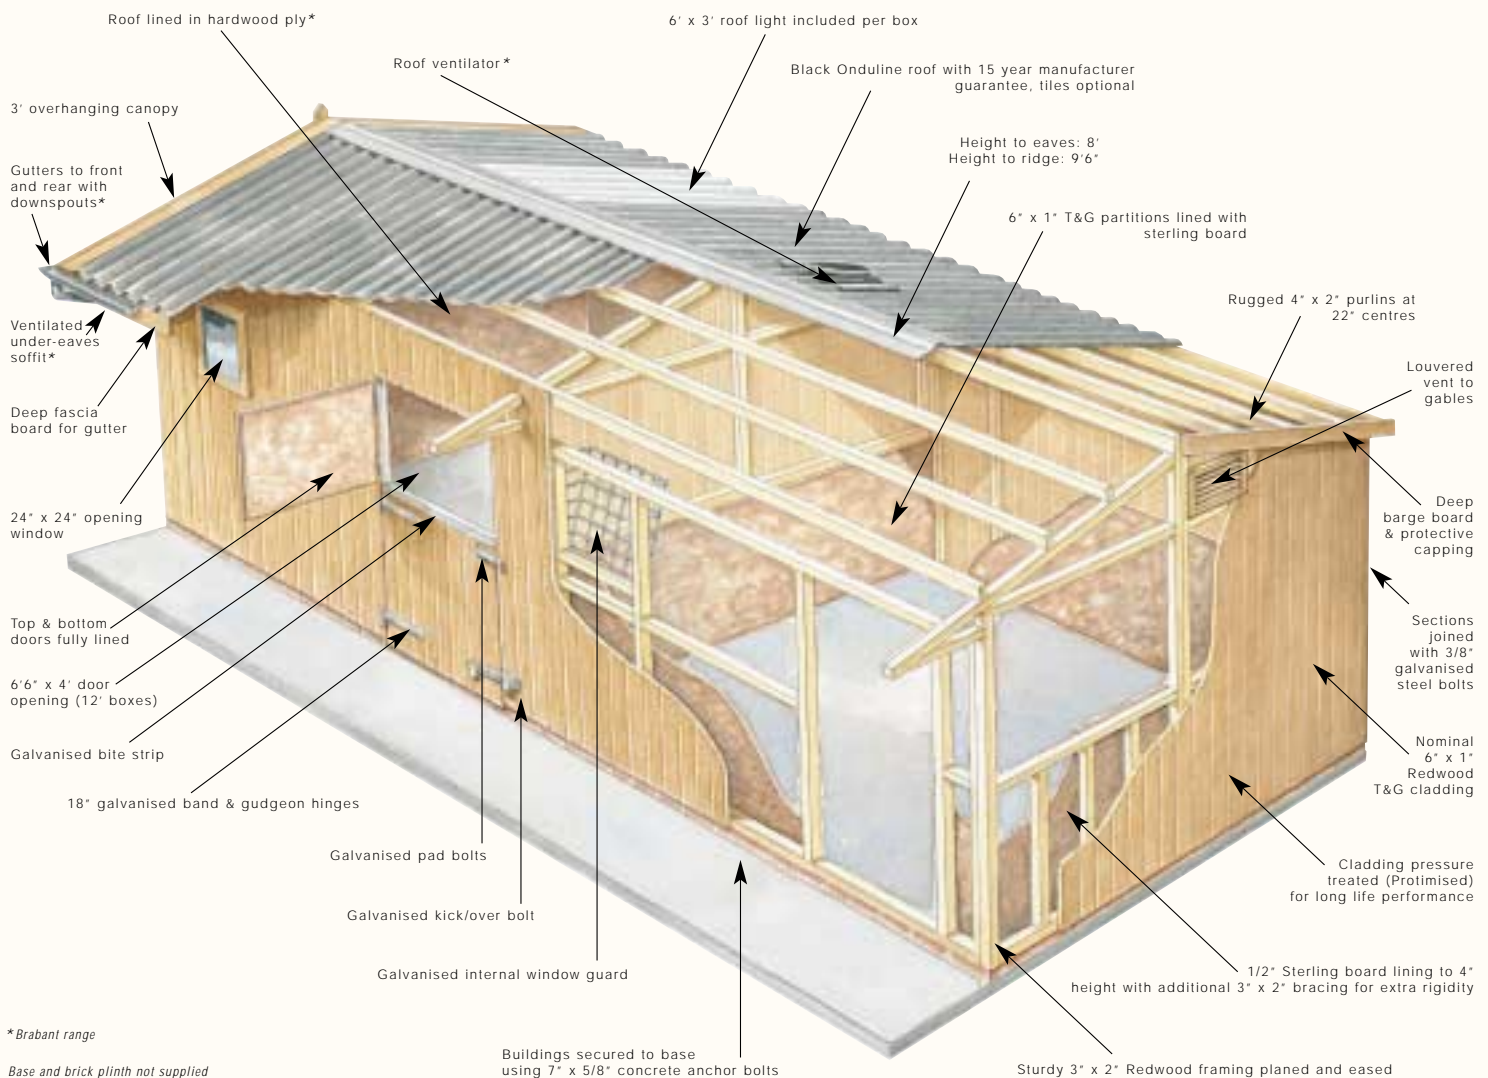

## JUTLAND RANGE

This is our standard stable, its heavy duty construction and high quality of finish is suitable for all stabling requirements. All buildings are covered by our unique 7-year warranty.

## BRABANT RANGE

The Brabant is built to the same structural design as the Jutland, but is finished internally to an even higher specification and includes, as standard, some of the fittings and ventilators that are optional additions to the Jutland range:

- Fully lined ceiling
- Full height kicking boards
- Talk grilles between adjoining stalls
- Louvred vents in full height partitions
- Matchboard soffit with ventilators
- Roof ventilators
- Guttering to front and rear with downspouts
- Inside/outside tie rings and manger

S T A B L E S

Clydesdale stables can be designed in just about any configuration, incorporating stores, garages, field shelters and tack rooms to suit owner's individual requirements. And being fully sectional, they can be easily added to or extended in the future.

The standard roof material used on both the Jutland and Brabant ranges is low-maintenance black Onduline, also available in a choice of rural colours. Pantiles create a particularly attractive roof, and our classic designs have the option of trussed raftered construction for such applications.

 Right: Stable block with open store

S T A B L E S

As all buildings are made to order, we are able to offer a wide range of finishes and options to truly personalise your stables or meet planning constraints. Different coloured timber finishes can be chosen, roof heights and pitches, door widths, internal dimensions, window styles, overhangs as well as many ventilation options.

The traditional vertical cladding is a classic design that blends well with the environment and is both attractive and functional.

Above: Small yard with carriage store  
Right: In-line stabling finished in Forest Green

For the larger yard, American Barns are an increasingly popular alternative to individual stables, offering the convenience of sheltered accommodation and storage and made to the same exacting standards as all our other sectional buildings.

These large span buildings have substantial trusses and framing and can be fitted out with any combination of stables, feed stores and tack rooms. They are delivered and erected to most parts of the UK, Eire or mainland Europe by our own team of joiners.

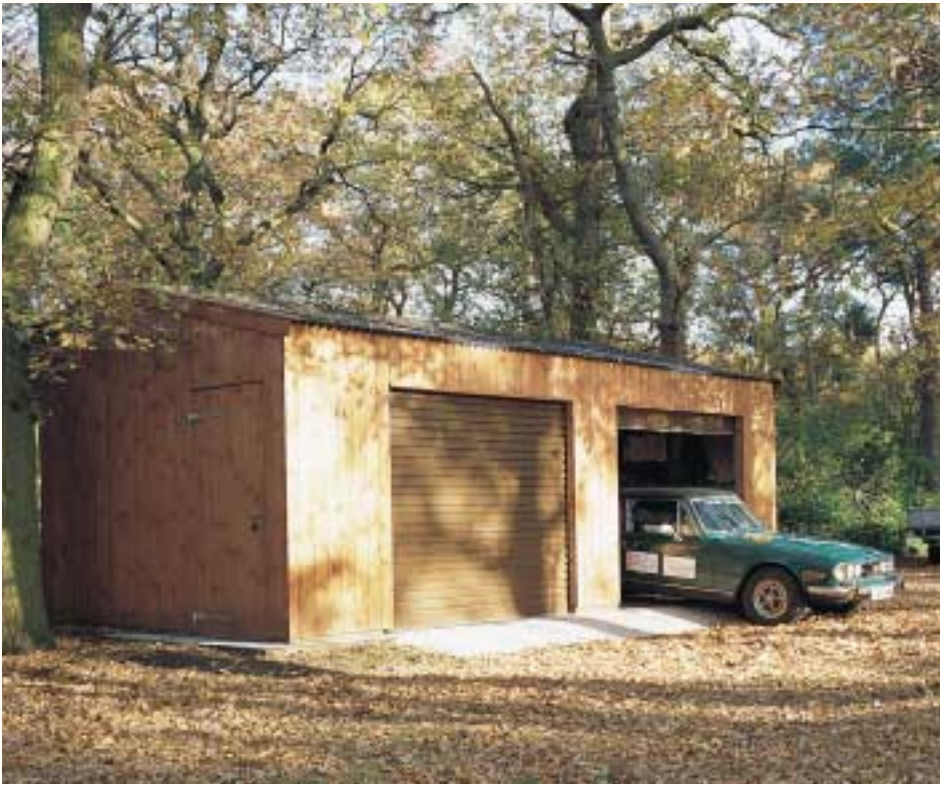

We also manufacture and supply stalls and doors for the internal refurbishment of existing barns and buildings.

Right: Ten-stall American Barn, Ireland

SECTIONAL TIMBER BUILDINGS

In addition to stables and American Barns, Clydesdale manufacture a wide range of sectional timber buildings including garages, workshops, stores and garden buildings.

All buildings are made from the same pressure-treated 1" thick (nominal size) Redwood cladding as our equestrian buildings, with substantial frames and trusses. Security features can be included to help prevent forced access, and buildings can be insulated, lined or floored to suit specific applications. Sectional buildings can be supplied on a 'delivered only' basis, or installed nationwide by our own team of joiners.

Above: Classic car double garage with personnel door

Right: Covered carport with attached double-door storage

#### COMPARE AND EVALUATE

Stables represent a substantial investment, and we strongly recommend customers to compare our buildings first-hand with any other manufacturers being considered.

We have stables on display at our farm workshops and visitors are always welcome by appointment. Alternatively, we can usually co-ordinate a visit to view Clydesdale stables in your own area.
